LETTER OF TRANSMITTAL

His Excellency

GOV. CLYDE R. HOEY

Raleigh, N. C.

SIR:

I have the honor to transmit herewith the report of the Superintendent of Operations of the North Carolina Sanatorium and Western North Carolina Sanatorium for the Treatment of Tuberculosis for the biennium ending June 30, 1940, together with report on the status of the proposed Eastern Carolina Sanatorium to be located at Wilson, N. C.

We are happy to call attention to a decrease in the death rate from tuberculosis in the State during the past year but desire to again emphasize the need for adequate facilities for the prevention and cure of this scourge. The work of early diagnosis has been expanded and we are indebted to the private physicians, the health and welfare officers, and the school authorities for their splendid coöperation. The facilities for the care and treatment of patients have been enlarged through the completion of units at both institutions.

We have not been able to successfully work out an arrangement for Federal participation to the required extent of forty-five per cent for the construction of the Sanatorium at Wilson and we respectfully urge that the coming General Assembly make immediately available an additional sum adequate to construct an Eastern North Carolina Sanatorium to meet the great need of this section of the State.

On behalf of the Board I desire to express to the Superintendent and his staff at both institutions our thanks for and appreciation of the splendid manner in which they have performed their respective duties.

The members of the Board have been diligent and interested in the fulfillment of their responsibilities and I desire to express to them my profound appreciation of their interest in and attention to the work in which we are all engaged.

Respectfully submitted,

L. LEE GRAVELY,

Chairman, Board of Directors.

REPORT OF THE SUPERINTENDENT

*The Board of Directors of the North Carolina Sanatorium
and of the Western North Carolina Sanatorium,*

MR. L. L. GRAVELY, *Chairman.*

Gentlemen:

Herewith is submitted the report of the North Carolina Sanatorium and of the Western North Carolina Sanatorium for the biennium ending June 30, 1940.

Separate statistical and financial reports are made of the North Carolina Sanatorium with its white, children, Negro and prison divisions and its extension department, and of the Western North Carolina Sanatorium, which is under the capable direction of the associate superintendent and medical director, Dr. S. M. Bittinger.

There has been a still further reduction in the tuberculosis mortality rate during the biennium. In 1937 the mortality rate from tuberculosis in North Carolina was 54.8 per 100,000, and in 1939 it was 51. Although North Carolina is a tuberculosis resort state and although the state has a 30% Negro population, in which the death rate is more than three times that of the white, the tuberculosis mortality rate for North Carolina was only 4.4 per 100,000 higher than the average for the United State.

Experience has shown that the control of tuberculosis depends first on early diagnosis and second on isolation and treatment of the active cases.

EARLY DIAGNOSIS

At both the North Carolina Sanatorium and the Western North Carolina Sanatorium diagnostic clinics are conducted daily except Sunday, and the extension department of the North Carolina Sanatorium keeps three clinic physicians in the field who work in coöperation with private physicians and with county, health, school and welfare authorities. Since school children under twelve years of age rarely have active tuberculosis, we have been limiting our school clinics to pupils twelve years of age and over and to those under twelve who have suspicious symptoms and to those who have been exposed to

known cases of active tuberculosis. The study of school and college students is made by giving the tuberculin test and by making X-ray films of the positive reactors. In recent years we have been able to get a number of the county health officers to give the tuberculin test themselves. Of the 121,911 school children and teachers studied during the biennium health officers gave the tuberculin tests to 87,145. We send our X-ray technicians from the North Carolina Sanatorium to make the X-ray films. They are brought back to the sanatorium for development and are read by our clinic physicians.

We use portable fluoroscopes in our adult clinics, and we find that practically all cases of tuberculosis, even those in the early, curable and non-contagious stage, can be detected by means of the fluoroscope. It is necessary to have only the suspicious and positive cases X-rayed, usually not more than one out of every ten or twelve examined. We are greatly pleased, too, that the State Board of Health has recently provided a number of the county health departments with modern stationary fluoroscopes for use both in connection with their chest and syphilitic clinics. We hope that arrangements can be made whenever these fluoroscopes are provided for a weekly tuberculosis clinic to be conducted by a local physician or by the county health officer. We have offered to train physicians in the use of the fluoroscope whenever it is not possible to secure the services of an experienced fluoroscopist locally and several have taken advantage of our offer.

The Rosenwald Fund, of which Dr. M. O. Bousfield is medical director, has also offered to pay the salary of local Negro physicians to conduct tuberculosis clinics twice a week wherever a fluoroscope is available and provided the county health department will sponsor the clinic. Durham county has already arranged for such a clinic at Lincoln hospital to be held one afternoon and one evening each week.

We have found the private physicians of the state, the county health officers and the school and welfare authorities most coöperative. The county health officers make the preliminary arrangements for our field clinics and they do the follow-up work. Private physicians have shown a readiness to avail themselves of the service which we provide for the interpretation of chest X-ray films. During the biennium at the two institutions physicians sent in 7,733 chest films for interpretation.

This has proven one of our most useful means of discovering early cases of tuberculosis.

Recently equipment has been brought forward for making miniature X-ray films of the chest. Both 4 x 5 inch and 35-millimeter size films are being used. The procedure consists in making a photograph of the fluoroscopic image of the chest, and the films are called fluorographs. When the equipment is improved and is produced in quantity it will mark a forward step in tuberculosis control, for with one machine a thousand or more X-ray films can be made a day at a small fraction of the present cost per film. At present, however, the equipment is too expensive and imperfectly developed to justify its purchase.

ADDITIONAL SANATORIUM BEDS FOR ISOLATION AND TREATMENT

During the biennium there has been encouraging progress in providing additional beds for the isolation and treatment of active cases both by the state and the counties. During March 1939 the Gravely wing for patients and the nurses home at the Western North Carolina Sanatorium, which were built with PWA help, were dedicated with appropriate ceremonies and with addresses by Mr. L. L. Gravely and by the Secretary of State, Mr. Thad Eure. The Gravely wing is a duplicate of the Raspberry wing and brings the total capacity of the Western North Carolina Sanatorium to 330. The new wing at the Negro division of the North Carolina Sanatorium for 100 beds, also built with PWA help, was opened last fall. During the biennium eight of the counties in the state have either built new county sanatoria or have added materially to their plants. A total of 226 beds have been added by counties during this two-year period, 172 of which were for Negroes.

Since it is impossible for patients with advanced tuberculosis in a crowded home to keep from infecting the other members of the family, it is very needful for all counties to have institutions of their own to which they can send their tuberculous patients who are not suitable for admission to the state sanatoria, or for their suitable patients while they are waiting for admission to the state institutions. Several of the other counties are seriously considering building county sanatoria in the near future.

The three State Hospitals for the Insane have also improved their facilities for caring for their tuberculous patients recently. They now have a combined capacity of 300 beds for tuberculous patients. With the 200 beds in private sanatoria North Carolina now has altogether 2,346 beds for tuberculosis. This is less than one and one-third beds per death. The National Tuberculosis Association and the United States Public Health Service have found that it is necessary to have at least two beds per death in order to control tuberculosis in a given community.

THE EASTERN NORTH CAROLINA SANATORIUM

During the 1939 session of the General Assembly, Senator C. W. Spruill and Senator T. W. M. Long introduced a bill for the establishment of the Eastern North Carolina Sanatorium with immediate provision for 175 patients and an eventual capacity of 350. With the valuable assistance of Hon. J. Melville Broughton, Mr. L. L. Gravely, Mr. R. E. Finch, Mr. E. A. Rasberry, Dr. Ralph McDonald and other loyal supporters the bill passed both in the Senate and in the House with hardly a dissenting vote. A provision was added, however, making the \$250,000 appropriation conditional on securing 45% of the construction cost from the federal government. It was planned to get help from the PWA, but shortly after the passage of the bill PWA was discontinued. We then applied to the WPA authorities to secure their assistance. Provision of a \$52,000 limitation on the amount contributed by the federal government for any one WPA project further complicated matters. The state WPA authorities have been most coöperative, however. They assisted us in arranging for five separate projects, approved the temporary plans and authorized detailed plans and specifications to be prepared. Mr. Walter W. Hook, our architect, now has these ready for submission to the WPA authorities. We trust that they will be approved and that work on the new institution can be begun in the near future.

The bill also provided for the appointment of a site committee consisting of three members, all of whom should reside in western North Carolina. Governor Hoey appointed Senator Joe L. Blythe, of Charlotte, as chairman, Mr. Odus M. Mull, of Shelby, as secretary, and Mr. L. L. Burgin, of Hendersonville, as the third member of the committee. It was gratifying

that almost every county in eastern North Carolina was anxious to have the institution and offered one or more sites to the committee. After visiting all sites offered, 100 or more altogether, and after making return visits with the superintendent of the sanatorium and the engineer of the Budget Bureau to several of the more favorable sites, the committee selected the site of 100 acres offered by Wilson. The site is located on a beautiful slope on the road to Rocky Mount and bordering on the city limits of Wilson. Public spirited citizens of Wilson contributed \$20,000 in cash for the purchase of the property and we now have a title to the property. The board of directors also secured an option on 24.8 additional acres adjoining the eastern border of the property at the very reasonable price of \$150.00 per acre. This option expires December 31, 1941.

After the Eastern North Carolina Sanatorium is built with its full quota of 350 beds, it is thought that it will probably not be necessary to ask the state to provide any additional beds. We will need, however, to continue to urge all counties either to provide a sanatorium of their own, or to join with one or more neighboring counties to provide an institution for their patients who are not suitable for treatment in state sanatoria until there are at least two beds per death.

TRAINING SCHOOL FOR NURSES

Our training schools for both white and Negro nurses supply a real need. There is a scarcity of nurses well-trained in tuberculosis work, and our graduates are always in great demand. Our training school for Negro nurses is one of only three such schools in the United States. The arrangement which we have had for some years for our white nurses to take their third year of training at the Moore County Hospital at Pinehurst and our Negro nurses to take their third year at Lincoln Hospital, Durham, continues to be quite satisfactory, and we greatly appreciate the coöperation of the authorities at these two hospitals. Miss Martha C. Newman, who had been our capable superintendent of nurses for our white training school for nine years, to our regret resigned last fall to go into private nursing, but we were fortunate to secure in her place Miss Eula Rackley, who has been serving most acceptably in her stead. We are greatly pleased over the fine recovery which Mrs. Carrie Broadfoot, our capable and long-time superin-

tendent of nurses at our Negro division, made from her serious accident last summer.

Our institution and the anti-tuberculosis cause in the state and nation sustained a great loss in the passing on last January 20th of Dr. M. L. Stevens, who had been a most active and valuable member of our board since 1935. He was a member of the building committee and chairman of the landscape committee of the Western North Carolina Sanatorium, and devoted much time and thought to promoting the interests of both sanatoria. He was a member of several of the more important state and national medical societies, he was greatly interested also in civic and religious affairs and was greatly beloved by all who knew him.

DONATIONS

We are grateful to the many friends of both institutions who have made generous donations of books, magazines, clothing, Christmas packages, and many other gifts. A list of these will be found in the body of the report of each institution. We are especially grateful to the Rosenwald Fund for paying the salary of one of our Negro resident physicians at North Carolina Sanatorium and to the Woman's Auxiliary of the Medical Society of the State of North Carolina for providing a free bed at the Western North Carolina Sanatorium in addition to the bed which they have been paying for at the North Carolina Sanatorium for many years. We wish also to make special mention of the generosity of Mrs. F. S. Terry, of Black Mountain, in providing a large amount of shrubbery and many valuable trees for the beautification of the grounds at our Western North Carolina Sanatorium.

I wish to express to each member of the board my sincere appreciation for your loyal and hearty support.

The various employees of both institutions have rendered faithful and loyal service. I am grateful to them all and especially to Dr. S. M. Bittinger, associate superintendent and medical director at the Western North Carolina Sanatorium, and to Dr. C. D. Thomas, assistant superintendent and associate medical director at North Carolina Sanatorium.

Respectfully submitted,

P. P. MCCAIN, *Superintendent,*
N. C. Sanatorium and Western N. C. Sanatorium
and Director, Extension Department.
